# [DRAFT v2] MOR Readiness Module: Requirements Outline

Draft date: @October 28, 2026

## Overview

The purpose of this document is to outline the software requirements specification for the MOR Readiness module and its feature set. The MOR Readiness module will help property management agencies prepare for annual HUD audits by consolidating compliance data across operations into a single repository for a Government Auditor [*GA*] or Contract Administrator [*CA*] to review, indicating which areas of compliance may be deficient based on data in various system packages. In this MVP specification, external auditors (GAs and CAs) will not be considered in the system design – only property management agencies and their employees, and consultants who help them with compliance.

## Requirements Specification

### Definitions

- Property Management Agency [*O/A*]: the management agency of record for affordable housing units, aka the “Owner/Agent”.
- Property Management Employee [*ME*]: a ground-level employee or manager in a property management agency.
- Compliance Director [*CD*]: the director/owner of compliance operations in a property management agency.
- Compliance Consultant [*CON*]: a consultant who helps property management agencies improve their compliance operations.
- 3rd-party User [*3P*]: a third-party user, such as a tenant file reviewer, who performs services on behalf of the property management agency.
- Government Auditor [*GA*]: an auditor of the federal agency, HUD, or an auditor of a state agency.
- Contract Administrator [*CA*]: a subcontracted auditor for HUD or a state agency.

### System-wide requirements

| Requirement ID | Requirement | Functional/Non-Functional | Notes |
|---|---|---|---|
| SYS-N-100 | The system shall not allow a [3P or GA or CA] to access or modify any aspect of the MOR Readiness Module or its data, including all CRUD operations therein. | Functional | GA and CA are future stakeholders who will have role-based access to certain components of the system; for now, they are not permitted globally across the module. |

## MOR Audit Process

This is more the create/read/update data (new) to the system.

### Property Audit

| Requirement ID | Requirement | Functional/Non-Functional | Notes |
|---|---|---|---|
| PA-100 | The system shall allow a [ME or CD] to create a Property Audit with an audit type, effective year, audit notice date and audit notice document upload. | Functional | |

| Requirement ID | Requirement | Functional/Non-Functional | Notes |
|---|---|---|---|
| PA-101 | The system shall allow a [ME or CD or CON] to view a Property Audit and all metadata and documents, including associated Audit Findings. | Functional | TEMPLATE: CFI Audit Database (State, Investor, AOC, HUD) |
| PA-102 | The system shall allow a [ME or CD] to edit a Property Audit and all metadata and documents, including associated Audit Findings. | Functional | |
| PA-103 | The system shall allow a [ME or CD or CON] to view all Property Audits as a calendar. | Functional | |
| PA-104 | The system shall allow a [ME or CD or CON] to view all Property Audits as a table. | Functional | |
| PA-105 | ... | | |
| PA-106 | ... | | |
| PA-107 | ... | | |
| PA-108 | ...., | | |
| PA-109 | The system shall encrypt Property Audit data and attached documents at rest and in transit (using TLS 1.2 or higher). | Functional | This should be done automatically based on our platform architecture (maybe omit this and pull into higher-level platform architecture requirements spec) |
| PA-110 | The system shall render the portfolio-wide MOR calendar and table views within 3 seconds for up to 500 Properties. | Non-Functional | |
| PA-111-NEG | The system shall not allow a User to create a Property Audit for the same Property with the same audit type and effective year. | Functional | |

## Audit Findings + Corrective Actions + Resolution

| Requirement ID | Requirement | Functional/Non-Functional | Notes |
|---|---|---|---|
| AF-100 | The system shall allow a [ME or CD] to add Audit Findings with `condition`, `criteria`, `cause`, `effect`, `corrective action`, and `target completion date`. | Functional | |
| AF-101 | The system shall allow a [ME or CD or CON] to view Audit Findings and all associated metadata. | Functional | |
| AF-102 | The system shall allow a [ME or CD] to mark Audit Findings as corrected by adding `resolution comments` and `evidence` document upload. | Functional | See: EIV Discrepancy resolution process (DRP upload with comments) for example workflow. |
| AF-103 | The system shall allow a [ME or CD] to edit Audit Findings and all associated metadata. | Functional | |
| AF-104 | The system shall record an audit trail for every change to an Audit Finding, including user, timestamp, and previous and new values. | Functional | Auditors and Contract Administrators will review how findings were resolved. A change history supports the defensibility of corrective actions. |
| **AF-105**** | **The system shall convert the text representation of the `item_number` (e.g., "I.39") to a real link to the respective MORDOR document, and allow a user to upload a new version of that item number into MORDOR (if applicable)...<br>OR<br>The system shall allow a user to select an `item_number` from a dropdown list of the MOR Rulebook reference sources.** | Functional | May not be viable for MVP implementation, but a good Phase 2 addition. |

# Regulatory Data Review

Most of this is read-only data from existing modules in the system.

### Regulatory documents (MORDOR)

| Requirement ID | Requirement | Functional/Non-Functional | Notes |
|---|---|---|---|
| RD-100 | The system shall allow a [ME or CD or CON] to view all regulatory documents for the effective year. | Functional | Consolidated view of all MORDOR documents for the year. |
| RD-100-a | The system shall allow a [ME or CD or CON] to view all permanent documents in MORDOR. | Functional | |
| RD-100-b | The system shall allow a [ME or CD or CON] to view all annual documents in MORDOR for the effective year. | Functional | |
| RD-100-c | The system shall allow a [ME or CD or CON] to view all monthly documents in MORDOR for the effective year. | Functional | |
| RD-101 | The system shall allow a [ME or CD] to upload regulatory documents into MORDOR for the effective year. | Functional | |
| RD-102 | **The system shall allow a [ME or CD] to edit/replace regulatory documents into MORDOR for the effective year.** | Functional | New: no current method to store versions – how? |
| RD-102-a | **The system shall maintain a version control history for past files – without deleting them from the system upon replacement – and maintain an audit history of prior versions.** | Functional | New: need database/GCS methodology to maintain file version history. |
| RD-102-b | The system shall have clean UX to edit/replace regulatory documents into MORDOR. | Non-Functional | Need clean UX for replacing files (”whoops, accidentally uploaded to the wrong place!”) |
| RD-103 | The system shall allow a [ME or CD] to download all regulatory documents in MORDOR for the effective year as a ZIP archive. | Functional | Quick ZIP to send auditors a pre-compiled package of well-named and well-organized documents. |
| RD-103-a | The system shall set filenames for downloaded regulatory documents in MORDOR in the format `reference_source - associated_document`. | Non-Functional | E.g., “I.18.1 - HUD-9839.pdf” and “I.24.1 - HUD-2530.pdf”. |
| RD-103-b | The system shall organize files in the ZIP archive as follows:<br>• `document_timeline == “monthly”` → a folder named “monthly”, with subfolders for each month where folder names are in the format `YYYY-MM`<br>• `document_timeline == “yearly”` → a folder named “annual”<br>• `document_timeline == “permanent”` → a folder named “permanent” | Non-Functional | E.g.,<br><br>ZIP<br>• monthly<br>◦ 2026-01<br>◦ …<br>◦ 2026-12<br>• yearly<br>• permanent |
| RD-104 | The system shall load and reconcile the documents in MORDOR within 2s. | Non-Functional | Current MORDOR document reconciliation method needs speed optimization. |
| RD-105-NEG | The system shall not allow a [3P or GA or CA] to access or modify any aspect of MORDOR, including all CRUD operations therein. | Functional | |

### EIV Reports and Discrepancies (EIV Module)

| Requirement ID | Requirement | Functional/Non-Functional | Notes |
|---|---|---|---|
| EIV-100 | The system shall allow a [ME or CD or CON] to view Property EIV Reports for the effective year. | Functional | |
| EIV-101 | The system shall allow a [ME or CD or CON] to view Property EIV Discrepancies for the effective year. | Functional | |

| Requirement ID | Requirement | Functional/Non-Functional | Notes |
|---|---|---|---|
| EIV-102 | The system shall allow a [ME or CD or CON] to view Tenant EIV Reports for selected resident files for the effective year. | Functional | |
| EIV-103 | The system shall allow a [ME or CD or CON] to view Tenant EIV Discrepancies for selected resident files for the effective year. | Functional | |
| EIV-104 | The system shall allow a [ME or CD] to download all EIV Reports for the effective year as a ZIP archive. | Functional | |
| EIV-104-a | The system shall set filenames for downloaded Property EIV Reports in the format `YYYY-MM - report_name`. | Non-Functional | E.g., “2026-01 - New Hires.pdf” and “2026-12 - Failed EIV Pre-Screening Report.pdf”. |
| EIV-104-b | The system shall set filenames for downloaded Tenant EIV Reports in the format `file_abbreviation - report_name (action_date)` where `action_date` is in the format `MM-DD-YYYY`. | | E.g., “APP - Existing Tenant Search (8-15-2026)” and “AR - Income Report (10-19-2026)” |
| EIV-104-b | The system shall organize files in the ZIP archive as follows:<br>• Property EIV: a folder named “Property EIV” with subfolders for each month where folder names are in the format `YYYY-MM`<br>• Tenant EIV: a folder named “Tenant EIV” with subfolders for each tenant where folder names are in the format `unit_number - tenant_full_name (management_software_vendor_id)` | Non-Functional | E.g.,<br>ZIP<br>• Property EIV<br>◦ 2026-01<br>◦ …<br>◦ 2026-12<br>• Tenant EIV<br>◦ 101 - John Doe (12345)<br>◦ 205 - Jane Doe (54321)<br>◦ … |
| EIV-104 | The system shall load EIV Report and EIV Discrepancy data for the effective year within 2s. | Non-Functional | |
| EIV-105-NEG | The system shall not allow a [3P or GA or CA] to access or modify any aspect of the EIV Module or its data, including all CRUD operations therein. | Functional | |

**Tenant files (ComplianceFiles – CORE Module)**

| Requirement ID | Requirement | Functional/Non-Functional | Notes |
|---|---|---|---|
| RF-100 | The system shall allow a [ME or CD] to select a list of ComplianceFiles for review from the rent roll containing current tenants/units at the Property. | Functional | |
| RF-100-a | The system shall display the full list of Units, Tenants, ComplianceFiles as an intuitive interface that requires no system training. | Non-Functional | Potentially a table with toggles and tree views to quickly navigate Unit→Tenant→ComplianceFiles construct. |
| RF-101 | The system shall allow a [ME or CD or CON] to view the list of selected ComplianceFiles for review. | Functional | |
| RF-102 | The system shall allow a [ME or CD] to edit the list of selected ComplianceFiles for review from the rent roll containing current tenants/units at the Property. | Functional | |
| RF-103 | The system shall support rent rolls of at least 500 Units per Property and keep the Unit, Tenant, and ComplianceFiles tree responsive, using lazy loading or pagination. | Non-Functional | Large properties can produce long lists. This supports RF-100-a, which calls for a navigable Unit to Tenant to ComplianceFiles structure. |
| RF-104-NEG | The system shall not allow a [3P or GA or CA] to access or modify any aspect of Compliance Files, including all CRUD operations therein. | Functional | |
